The University of Hong Kong, Hongkong, China

Oct. 2019 - Mar. 2020

Research Assistant, Supervised by Prof. Ping Luo

• One-stage Instance Segmentation. Proposed an anchor-box free and single shot instance segmentation method, termed PolarMask, which formulates the instance segmentation problem as instance center classification and dense distance regression in a polar coordinate. This work *PolarMask: Single Shot Instance Segmentation with Polar Representation* is accepted by CVPR 2020.

SenseTime, Beijing, China

Aug. 2019 - Mar. 2020

Research Intern, Supervised by Xuebo Liu and Ding Liang

• Optical Character Recognition. Did research on text detection and recognition in natural scenes, and tried to 1) solve the ambiguity in text detection and 2) design a real-time algorithm for arbitrary-shaped text detection and recognition. Papers on both topics are in preparation.

Momenta, Beijing, China

Jun. 2018 - Dec. 2018

Research Intern, Supervised by Dr. Xiang Li

- **Deep Neural Networks Exploration**. Did research on the receptive fields of CNNs, and designed a dynamic selection mechanism in CNNs that allows each neuron to adaptively adjust its receptive field. This work *Selective Kernel Networks* is accepted by CVPR 2019.
- **Object Detection**. Led a team to take part in Autonomous Driving Perception Task in AI Challenger 2018. Re-implemented and improved Cascade R-CNN to detect objections in autonomous driving scenarios. Our team finally secured the 2nd place in the task.
